

Condition Monitoring of Induction Motors

By Rubenka Bandyopadhyay

LAP Lambert Acad. Publ. Jul 2010, 2010. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand - Print on Demand Neuware - Induction motors are widely used in present day industries, on account of its ruggedness, low cost and easy speed control. Condition monitoring of induction motors-the process by which certain parameters are continuously observed and analyzed for early fault detection, has become a vital part of machine maintenance. In this work, Artificial Neural Networks (ANNs) have been used for condition monitoring of 3-phase induction motors. RBF and FFBP neural nets were used for comparative analysis. Data collected from vibration and current sensors were processed and fed as inputs to the ANN. Continuous Wavelet Transform (CWT) and Park's Transform were used for processing. Faults such as bearing fault, broken rotor bar defect and stator winding unbalance faults have been dealt with. A multi-class approach using ANN has been attempted. This book looks into the process by which neural nets may be used to detect faults, which should help researchers, practicing engineers involved in industrial processes using induction motors and anyone else who is interested in using measured parameters in machines, to predict the occurrence and nature of fault. 80 pp. English.

Reviews

This is an amazing book that I actually have actually read through. I am quite late in start reading this one, but better then never. You will not truly feel monotony at anytime of the time (that's what catalogs are for concerning should you ask me).

-- **Scottie Schroeder DDS**

Absolutely essential read through ebook. Better then never, though i am quite late in start reading this one. I am just delighted to inform you that this is actually the finest ebook i actually have read through during my own existence and might be he greatest publication for actually.

-- **Ms. Vernie Stracke**
